## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: On page 27, pulse signal  $\Phi$ ESPB and  $\Phi$ ESPA are both referred to as being variable and fixed even though only one is fixed and one is variable.

### ***Drawings***

3. Figures 13-18 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Allowable Subject Matter***

4. Claims 1-3 are allowed.

5. The following is an examiner's statement of reasons for allowance: prior art fails to disclose a solid-state imaging device, in combination with all the other elements claimed, comprising: a first row selection circuit configured to output a signal for selectively specifying a pixel row in the pickup region on the basis of a first pulse; a second row selection circuit configured to output the pixel row in the pickup region on the basis of a second pulse; and a plurality of vertical signal lines provided in correspondence to a plurality of pixel columns in the pickup region to transmit a signal output from the unit cell of each pixel row in a vertical direction; wherein the vertical driving circuit drives two or more times the reading circuit of the unit cell of the pixel row selected in the pickup region on the basis of an output signal from the first row selection circuit and the second row selection circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2615

a. Yonemoto (U.S. Patent 5,894,325) discloses an electronic shutter scanner and a reading vertical scanner, but fails to disclose vertical driving circuit drives two or more times the reading circuit of the unit cell of the pixel row selected in the pickup region on the basis of an output signal from the first row selection circuit and the second row selection circuit.

b. Nakamura et al. (U.S. Patent 6,507,365) discloses an electronic shutter scanner and a reading vertical scanner, but fails to disclose vertical driving circuit drives two or more times the reading circuit of the unit cell of the pixel row selected in the pickup region on the basis of an output signal from the first row selection circuit and the second row selection circuit.

7. This application is in condition for allowance except for the following formal matters: as described in paragraphs numbers 1-3 in this office action.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
